

High Efficiency Laundry Equipment Best Practices

1

Use only HE detergent.

Since high efficiency washing machines use less water than traditional machines, it is important to only use detergent that is labeled high efficiency or HE. These detergents are specially formulated to disperse quickly and create less suds.

2

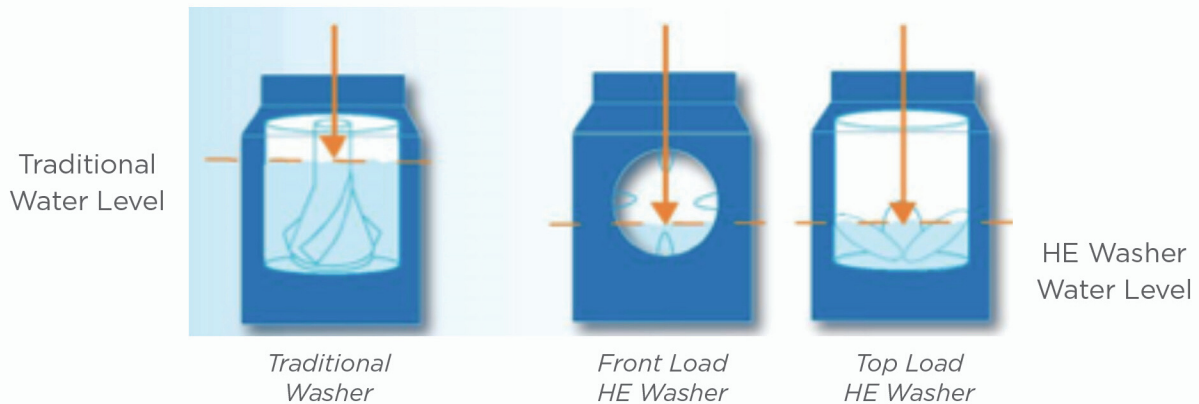

Do not mix powder and liquid detergent.

Do not add powder and liquid detergents to the dispenser compartment at the same time. Mixing powders and liquids together can clog the dispenser and cause leaks.

3

Enjoy the water and energy savings.

HE washing machines are designed to be more efficient. The low-water wash and rinse cycles use less water and energy compared to traditional machines, therefore it is normal for some of the load to be above the water line. The machine will automatically adjust the water level to the load size.
